

"6 Charts to make 6 Figures in 6 Months".

Few understand the massive change coming to our existence. In fact, it's already changed so much to 10 years ago that it's ridiculous.

I repeat what was said in the previous newsletter, this is likely not a new cycle or run of the all-time high. Could it be? Sure, anything is possible. But if you're the: "Jeesh Kevin...hope my shitcoin XYZ is going 10000X so I can escape the matrix next year" type of person.

Honestly, you're probably better off sitting out this run, because chances are big you will cuck things up along the way and lose all your money.

This cycle is not for noobies, yet there are noobies and plenty of them reading our letter.

And I love all of you and I truly hope you make some money in this cycle. Trust me, you'll need it.

I could have been out in the club, watching Netflix or whatever, but instead I'm hoping to reach you in time for the weekend so you receive this important piece of information, so that you can position yourself for success making money with Crypto.

In other words, this cycle is not for investment, just swing trading. Miss your exit targets, which I will give you in this newsletter below and you will end up holding the bag till you perhaps see Bitcoin under 5 digits again.

On the other hand, play it well and you might 1.5X your net worth before end of this year.

50% increase sounds better than being down 15% by year end because of being ignorant and lazy doesn't it?

I thought so too, so let's get to it!

The charts that will be covered in this April edition are the following: **S&P500, Bitcoin, Bitcoin Dominance, USDT (Tether) Dominance, Crypto Total 2 (Mid-Tier Altcoins, excluding shitcoins)**

MACRO

S&P500

Support: ~3900

Inverse Head & Shoulders Target: ~5000

The chart is upside down so it's easier to show the head & shoulders pattern. There's also a triangle inside which creates one of the cleanest patterns to get a clue where the indices could be heading. There is room in the short-term for a pullback. For BTC, as we'll see, it could mean a retest to the \$25K. However, naturally we expect both to go hand in hand and break to the upside around the same time.

For SPX, break the 4200 neckline and off should we be to **5000**.

For SPX it would be an all-time high but for BTC it would be just north of \$40K.

Setup is simple, buy the break-out or buy the support (indicated with the sniper circle, and sell at target or preferably just before). Not financial advice.

CRYPTO

BTC - High Time Frame

Support: \$25K

Inverse Head & Shoulders Target: \$40K

There we go, hope that wasn't too much boring Macro for you to digest but I know if I didn't put it in front, you probably wouldn't have read it. It's first for a reason. It's important.

BTC should look obvious, support \$25K and target \$40K. Right now it's still waiting before launch. We need a closer look to understand what's happening right now.

BTC - Low Time Frame

Support: \$25K

Triangle Target: \$32K

The lower time frame shows the channel the price has been in, post breaking out and the price currently sits on top of the channel.

The question is: is it going to break down first or head straight up?

I can only speculate. The move would be around 10% either direction.

The targets would be exactly a retest to \$25K or up to \$32K. I'm personally leaning 51% bullish, simply for the reason that too many peasants missed the run early on. That, and it's not making a marginally higher high or a head & shoulders pattern, so that makes it slightly more bullish than bearish. I'm positioned for both ways, so I sleep just fine. I hope you are too.

Bitcoin Dominance (BTC.D)

Support Level: 45%

Resistance Level: 48% - 50%

The dominance on Bitcoin has not changed much, and it seems like it could use a break of some sorts, which is good for Altcoins.

Some Alts, like XRP have managed to outperform BTC already despite it's strong dominance.

I do still expects some of the Mid-Tier Alts to do 2X whilst BTC reaches it's target, so I'm keeping an close eye on the BTC.D charts, as well as ETH/BTC to show who is leading. We could go bit higher, perhaps run the 49% or 50%, then drop to 45%. Then at 45% the entire rally could be over already. This is something that we will evaluate once it happens. For now, BTC is still it.

If you are in our Telegram or Discord, you will hear first as soon as we reverse and pivot from BTC to select **Alts**.

Crypto Total 2 (Altcoins Index, excluding Bitcoin and Shitcoins)

Support Level: ~570B

Resistance Level: ~600B

When you look at all the charts, from BTC to S&P and also the USDT Dominance, you will find they all have one thing in common. **A head & shoulders (or inverse) on all of them.**

What does this tell you? **A MOVE IS INCOMING.**

The Total 2 chart, when you compare it to BTC is still pre it's key break of the neckline of the inverse H&S, which is at \$600B.

You can spot a couple of rejection candles at this level, so we could head for a small pullback first. But once we break clean, the Alts will run (the large caps to be exact). And the target is \$850B, which would be roughly a 42% increase. Whereas for BTC, from \$25K to \$40K it would be 60% or still 43% from \$28K (price at time of writing). So you do the math :)

BONUS

USDT Dominance

Support Level: ~6.4%

Resistance Level: ~7.2%

If you made it this far, congratulations. You are a G and there's still hope for you. As reward, I'm giving you the [Key to the Crypto Matrix](#). The previously secret chart that absolutely **NON of your favorite influencers are talking about**, the USDT dominance.

I truly wonder why? Is it because they are so fucking stupid, or am I a genius? Or could it be, that they don't have your best interest at heart?

Why do I sound arrogant you might ask, well because look at it and you can see that since 2019 (since we officially have data on USDT) this chart gave you the **EXACT Tops** and the **EXACT Bottoms** of the cycles.

Now look at the upper right section, you see the massive triangle (similar to the S&P). That's called **CONGRUENCE** my friend, it's the key word for the all the markets.

Because the more congruence you see across different Assets in different Sectors, the higher the probabilities it will occur.

Look closer at the triangle, and you see a mini head & shoulders.

Once it breaks, the rally is on and I gave you the target.

If everything happens exactly as I think it will, I will personally be exiting **100% before the target**, as soon as we touch the **diagonal support line.**
