

“Sell in May and go away”?

Banks are failing, inflation still rampant, the recession overdue, the “great reset” in full swing but the public is coming to consciousness on the big scam this cartel banking system has been. Nothing like a privatized institution in charge of printing the money on behalf of the world to benefit those with close ties to the source, while the rest of us peasants slave away to make profits for their corporations.

However, for as long as we have access to the markets and AI hasn't replaced us savy traders. Through the gift of technical analysis we can still see their trail through the curtain of Bullshit.

You watch the news and we watch the charts. One deceives and the other tells the truth.

Stay a slave or start slaying the markets. Still waters never made a skilled sailor, so what the fuck are you waiting for?

We are at a precipice of history, so get woke or go broke. Live life with purpose instead of pleasantries, because only peasants care for pleasantries.

In this Newsletter you receive the full **360 picture**, from Macro to Crypto. All the charts that matter and some.

If you receive value from this, don't be

greedy with the info. Share it with your friends and family.
Don't let them get crushed to corps by corporations through manufactured ignorance.

MACRO

DXY

Support: ~100

Resistance: ~101.6 + Diagonal Trendline from September (white)

The projected path is **Dollar weakness** as long as the main trend, indicated by the diagonal trendline from September 2022. The current triangle pattern has a "strong" bias towards the **upside** for mainly this reason.

DXY - Short Timeframe

Support: ~100

Resistance: ~101.6

To add to the bullish case, the triangle has lower highs instead of marginally higher highs which is generally bullish. It is consolidating at a key level (101.6) and the short-term target for the DXY is 99.2 if the triangle breaks to the upside (chart is inverse). If that happens, DXY will lose the major key level of **100** and this could cause a psychological shift in favor of Gold and potentially Bitcoin (so far the correlation is there) over Fiat currencies and Equities potentially. More on this later.

GOLD

Support: ~2000

Bull flag Target: ~2890

The Gold chart is perhaps the most important chart to follow closely, as it shows an intense **direct correlation to Bitcoin**. This is important to understand for the narrative as it could be in favor of Bitcoin with banks failing. This ofcourse, would likely be bullish for **select Altcoins** also. As long as meme tokens do crazy things, there's hope for retail in this run.

However, the reason for the pure and naked to the eye chart of Gold is so that you can observe the critically and importance of this event unfolding, **on the balance of probabilities**. Gold has only been above \$2000 a total of four times in the last decade. A third approach of the \$2000 level now for the third consecutive time since 2020 alone indicates a **big chance** that Gold is ready to break above \$2000, perhaps for once and for all.

The implications of this are enormous. Just think what a 33% surge in Gold will mean to society, and your purchasing power. Retail, lower class and middle class will get slaughtered. But remember, money never disappears, it only changes hands.

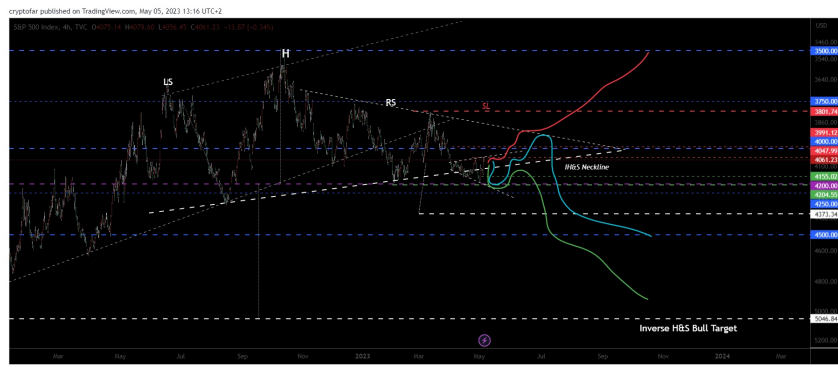

GOLD - Short timeframe

Support: ~2000

Bull flag Target: ~2890

The **\$2000** level has now become resistance once again and it will be critical to hold this level. Odds favor the bulls as it stands for now.

TradingView

STANDARD & POOR 500 (SPX)

Support: ~4000

Inverse Head & Shoulders Target: ~5000

The S&P could have a pullback, but for the head & shoulder pattern to remain "intact" the pullback can't be too deep. If it consolidating at the key-level of **4200** which is the neckline for the H&S. Combine this with visible increased volatility in the short-term (see megaphone pattern). The move to the upside (also here, chart is inversed) is expected to be explosive. Again, you cannot afford to miss the run. Also, as we'll see later there could be a case where Crypto might even *de-correlate* with Equities and instead continue it's strong correlation with Gold.

The narrative should change.

CRYPTO

TradingView

USDT Dominance - Update

Support Level: ~7%

Resistance Level: ~8%

As you know from our Newsletter in April, the USDT.D chart is a very curious one, as it acts as an extension of the US Dollar (DXY) chart but with slight variation. Let's not forget, USD Tether currently forms the backbone for all Cryptos and most exchanges and it it's impact on this industry tends to be underrated.

The pattern should be clear, **the bias is heavy to the downside** and the interesting thing about this chart is that it's forming an slightly imperfect head & shoulders formation on the right shoulder as we speak. If the key level of 6.5% (round number) which not randomly forms the neckline for the head & shoulders AND happens to be close to the 7% which is also a key level due to this level being the volume by price support level (meaning most high volume trading activity happened there).

BITCOIN VS GOLD

Support: 14
Triangle Bull Target: 16

Look, there lines drawn are the likely scenario casts. There's still a roughly speaking 33% chance that we see a moderate pullback first. A black swan event could trigger this. How many saw the Covid crash coming in March 2020? Not many, yet there was a minority that was on the right side of the trade and at that point I was personally as well which led to the formation of Awareify. However, for reasons explained on the Gold chart. The bias is to the upside, and if Gold breaks-up for a 33% move, I don't see a scenario where BTC couldn't do triple that.

One more look at this chart, the 14 level is the neck-line for the major inverse H&S pattern, which has broken out and is now consolidating at the same neck-line level and holding as support. It **could still trigger to the downside**. Contingency plans should be prepared for this scenario.

Remember, you are a savvy and savage investor reading this newsletter. Armed and equipped with information that can alter your life forever for the greater good. All you need is one cycle played at your A game, so whichever direction the next move will be, you must be ready to take advantage.

BITCOIN VS NASDAQ (EQUITIES)

Support: 2
Inverse Head & Shoulders Target: 3

What do we see? Another inverse head & shoulders. Bitcoin is expected to outperform both the Nasdaq and Gold to the upside. How interesting, and yet most people are still bearish, overly in fear because we are exactly at the **DENIAL** phase of the market in terms of psychology. Well I only have one thing to tell you. You need to stay hydrated (be water my friend). Nobody gives a shit if you were right or wrong. Only thing that matters is whether

you take action or watch from the sidelines as you're financially raped into poverty.

BITCOIN DOMINANCE - BTC.D

Support Level: 47%

Resistance Level: 55%

BTC.D is looking like it could be running strong here to **the upside**. This could be a good and a bad thing that's not conclusive yet.

However, as we are bullish biased for Crypto this means that Bitcoin will take the lead and could even outperform most of the Alts. It has happened before hasn't it? I don't think Ethereum can stay too far behind though I don't yet about the rest.

BITCOIN

Support: \$25K

Triangle Target: \$30K

At last the King of Crypto, the one and only true bet in favor of freedom? Probably not, but who cares. Whatever vehicle is most appropriate to use to better your wealth is a valid. And Crypto can sure be sweet. Imagine having bought \$1 worth of Pepe token two weeks ago and having made \$25K from it. Yes, you and I both know why we are here.

Bitcoin is relatively speaking far above it's inverse head & shoulders break-out level of \$25,000. And it's the weakest head & shoulders on the short-timeframe which is **bullish**. If it runs the swing high of \$31,050 it will invalidate the H&S bear target of \$22,624 and we could see it even above \$34,000 and potentially over-performance to the nice and round number of \$35K in the very near term.
